According to § 8 of the Medical Devices Operator Ordinance (MPBetreibV), the reprocessing of ultrasonic probes (Urology / Gynaecology / Obstetrics) has to be carried out with suitable validated procedures.

In 2020, the RKI stated that the wipe disinfection of semi-critical ultrasonic probes is not valid. The BfArM has concurred with this professional assessment.

Geck® SaniTower – More hygiene and safety in your surgery!

With the SaniTower you simplify the reprocessing of semi-critical medical devices. By means of immersion procedures, a practical application can be carried out.

More advantages. More possibilities.

- Simplest operation
- High quality product design
- Optimised disinfection containers for immersion disinfection made of PP with scaling for exact addition of the amount of disinfectant or water and to prevent overflowing
- Also available as a rollable model
- Frame colour can be customised, logos can be applied
- Flat pedestal, therefore low risk of tripping
- Approved for all liquid, non-chlorine-based disinfection solutions

The Geck® SaniTower offers the perfect solution for daily immersion disinfection

Please observe the recommendations of the probe or disinfectant manufacturers!
