# Geck® hygiene systems

Good hand hygiene is no longer just a requirement, it has become a duty. In addition to a pleasant feeling of cleanliness, avoiding the transmission of harmful bacteria and viruses is of course a decisive factor when using hand disinfection.

Geck was on the lookout for solutions on how to translate the increased demands on hygiene and cleanliness and the individual needs of our customers into a high-quality product.

We have designed a series of hygiene systems that not only

fulfil their function, but also have a sophisticated and elegant appearance. There are different models to choose from in different price ranges.

We also offer products for individual protection and various anti-spit walls, which help reduce the risk of droplet infection.

More manufacturing expertise - Made in Germany.

The following products are available for individual selection:

## Disinfection systems

Aramia	4
Aroa	6
Aguarico	8
Atrato	10
Zubehör	12

**Facial visors** 13

More transparency. More smiling.

Geck®

# Facial visors

Geck facial visors can help protect when in direct contact from droplet infection. They can be disinfected and can therefore be used multiple times.

**Other advantages over classic mouth and nose protection:**

- No adjustment in the sensitive face area
- No fogging of glasses
- Your counterpart can see you smile!

More control

Geck®

# CustCounting systems

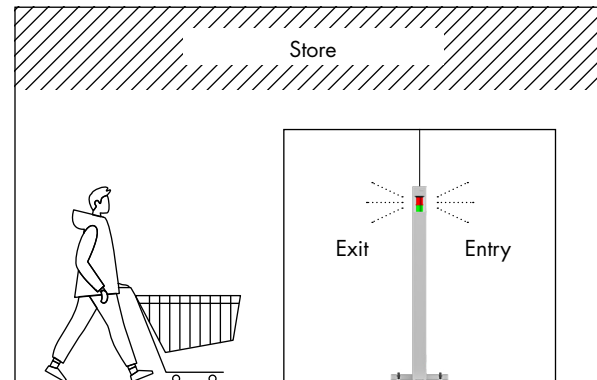

The customer counter regulates customer frequency via a traffic light

During the current COVID-19 pandemic situation, it is a real challenge to communicate in an easy-to-understand way whether a customer, visitor or guest is allowed to enter a room or has to wait for people who are already present to leave the location when the maximum permitted number of people has been exceeded. This needs to be achieved without having to use additional staff or your own employees.

# Verifiably check the flow of people

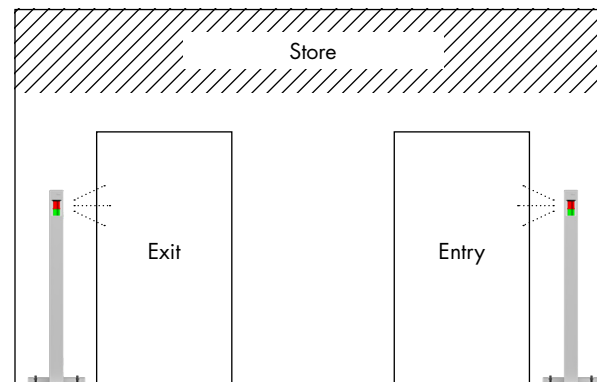

Our solution is based on a sensor-based application. It provides the perfect solution to the above task by registering the number of incoming and outgoing customers. When the number of customers reaches a preset limit for the store, the system switches the traffic lights to "RED" and signals to the customer that they have to wait. As soon as a customer leaves the store, the traffic light switches to "GREEN" and the customer can enter the store. The content of the display can be easily managed and edited remotely through a user-friendly web interface. The Geck® solution is easy to manage, easy to adapt and expand. The system is easy to set up and does not require any special skills. Local wireless network (WiFi) with Internet access and the standard networks required for the operation of the system.

## 1 micro controller

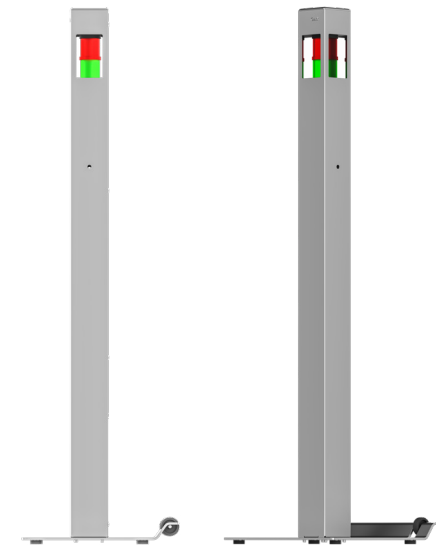

Installation in the middle of the walkway

## 2 micro controllers

Installation on the edge of the walkway/door

Devices communicate with each other

1 x traffic light with sensor

1 x traffic light with 2 sensors

for combined entry and exit (set up in the middle)

When using a cloud-based solution, there are monthly usage fees for software use (parameterisation and evaluation).

Solutions for more complex entry/exit situations on request.

# More competence for Point of Sale

Geck is one of the leading international manufacturers of product presentation solutions and shopfitting accessories for the self-service trade. Our digital services and elegantly designed hygiene systems also help to meet the highest demands.

We find individual, innovative and quick solutions to your requirements with respect to shop fitting, sales promotion and hygiene. Made of metal and plastic. In large series and short runs, even at short notice. We always offer something more: More quality, more individuality, more service. In brief: More competence for Point of Sale.

## Start-up business for 168

Anyone who is traditionally innovative can still call themselves a "start-up" after 168 years. With a wink. On the cutting edge.
